

St John's Innovation Centre

- Case Study

By controlling the entire process from design, manufacture and with in-house installation crews, xSign are able to offer the highest quality and service delivery.

St John's was the first innovation centre in Europe to focus on supporting knowledge-based businesses. It is the oldest such business incubator in the United Kingdom.

Using our jigsaw wall rail system for their door signs allows St John's to quickly update and replace tenant names. There is no need for an installer and replacement panels are delivered within 2 - 3 day from ordering..

"St John's Innovation Centre have been using the xsign Jigsaw system for the past 3 years. We find the system extremely flexible as we do have a high turnover of tenants. We would highly recommend xsign for their quality and quick delivery" - Miranda Edwards, Facilities Manager.
