

Wellington Place

- Case Study

Working with MEPC on their vast Wellington place site we have provided a range of bespoke, high-end brand and wayfinding solutions to complement the site architecture.

In conjunction with the architect and onsite cladding contractors we took an initial design concept through technical design, prototyping, and manufacture to produce a range of illuminated projecting signs with future proof interchangeable panels allowing for straightforward tenant changes. These were installed to bespoke fabricated brackets coordinated with the cladding structure.

Additional external wayfinding was developed with stainless steel fingerposts complemented with sturdy cast aluminium directional plates, enabling straightforward site navigation in a robust solution. Internally, we manufactured and installed a range of lettering in both stainless steel and bronze finishes to complement the existing interior spaces and further aid building navigation.
