

University of Birmingham - Digital Totem Signs

- Case Study

dlinexsign are delighted to present a key project at the University of Birmingham. As part of the University's programme of expansion and renovation, we have been appointed to install a number of digital wayfinding totem signs across the campus.

The initial installation features nine digital totems, housing 55" touchscreen displays. Our full install plan may see many more installed across the campus. The fibre-enabled digital displays provide students, staff and visitors with maps and wayfinding information, along with wi-fi connectivity.
