

Didsbury High School

- Case Study

xsign worked with architect, Pozzoni and contractor, BAM Construction, on the signage scheme that features at a brand new school, Didsbury High School in Manchester. Our signage scheme includes internal directory signs and external branding.

Internally, we have featured 3mm and 4mm directory boards fitted to our Jigsaw system, for changeability and security. Panels feature high resolution, 1800dpi digital print for maximum legibility.

Externally, we have manufactured a 3mm coated aluminium silver sign to display the school branding, with automotive grade paint and flushed wall mount.
