

Royal Wharf London

- Case Study

Royal Wharf is a new development next to the river Thames. dlinexsign began working with Ballymore in 2016 firstly as a consultant on the internal and external wayfinding of the site. After successfully completing the site, we were subsequently rewarded the contract to manufacture and install the signage.

So far, our work has included built-up brushed stainless steel numerals to all of the town houses, internal wayfinding and 4mm solid brushed stainless steel door numbers to all of the apartments. We are also manufacturing and supplying all of the street name signage and further works are expected throughout 2018.
