

Warwick Business School

- Case Study

In this project, we used multiple variations from our Jigsaw secret fixed sign system. Featuring 5mm thick frosted lucite panels on freestanding monoliths and suspended signs, all texted by UV digital printing, including hi-res orientation maps for wayfinding orientation. Within the modular system we also added secure paper holder for printed information.

Made in England to ultra-fast lead times, we export signs to more than 40 countries and offer turnkey product and graphic design, in addition to wayfinding, manufacture and installation.
