

# Citysuites, Manchester

## - Case Study

xsign provided the signage package at Citysuites in Manchester, a long-stay luxury residential apartment building.

The external sign package includes a bespoke fabricated illuminated lettering, constructed using aluminium rim and returns coated in high grade automotive paint. We have also provided a bespoke fabricated illuminated totem sign with aluminium panels.

The internal signage features a range of floor level indicators, stairwell signs, apartment door signs and general directional signage across the 17 floors of the building.

The fabricated illuminated external totem signs are clad with aluminium panels, seamlessly joined. The text detail is stencil cut and inlaid with push through opal lucite.

Floor level directional signs feature a 5mm thick matt black lucite panel with high polished edge and 3D Nitron Metallix copper effect foil, fitted to our patented Jigsaw secret fixing system to allow the easy changing of wayfinding information.

General door signs feature across the building, using 5mm thick matt black lucite panels and 3D Nitron Metallix copper effect foils.

We've used iconography throughout the building to highlight key facilities.

5mm thick matt black panels feature 3D Nitron Metallix copper effect foils to match the existing CitySuites door signs.

We've incorporated the CitySuites branding at the base of the panels featuring direct digital print to the substrate at high 1800 dpi print resolution.
