

Sheffield Innovation Centre

- Case Study

xsign provided the internal and external signage package at The Innovation Centre in Sheffield.

Externally, we have provided external lettering in brushed stainless steel, inlaid with LED modules to allow for illumination.

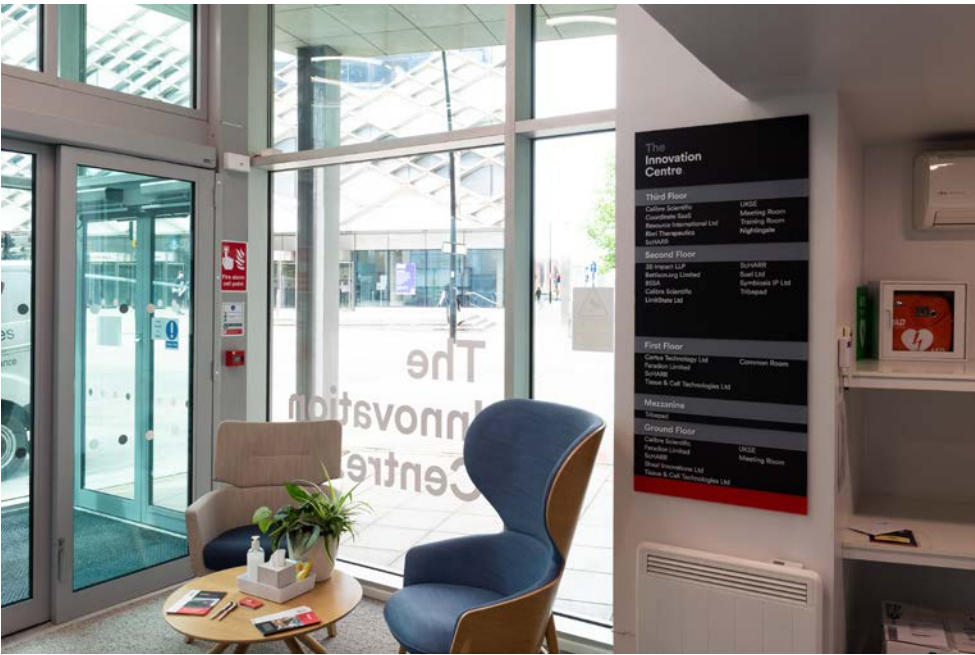

Internally, we have provided a range of signs including built up aluminium lettering in the reception area, a tenant directory sign, fitted on to our patented Jigsaw sign system, manifestations to glass, floor level indicators, matt black directional signage and our patented Puzzle paper insert door sign to allow for the easy changing of room names.

In the corridors we have provided our patented Puzzle paper insert door signs, allowing for the easy-changing of tenant information.

In the reception area we have provided a tenant directory sign on our patented Jigsaw product, making it easy to switch tenant panels, using the secret fixing method.

Throughout the building we have used floor level indicators to provide wayfinding navigation using a colour-coded scheme for reference on each of the floors.
