

# East Midlands Conference Centre

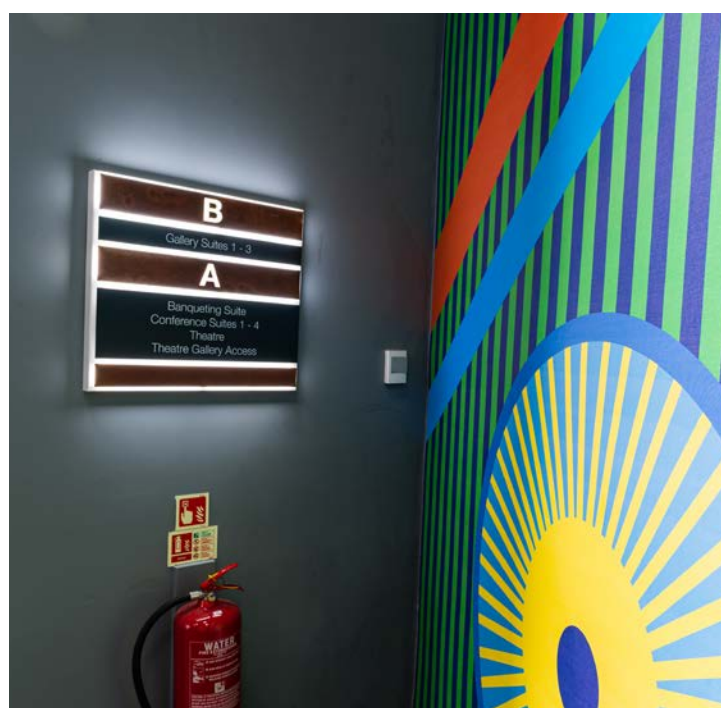

## - Case Study

xsign provided the internal signage package at the East Midlands Conference Centre in Nottingham.

The signage package includes our patented Jigsaw directory signage as well as cut stainless steel letters, an illuminated light box sign and pictograms.

Jigsaw allows the client to change panels if the signage or wayfinding requirements of the building change. This popular product choice has been used on numerous projects.

Stainless steel signage provides a timeless and elegant option in any setting.

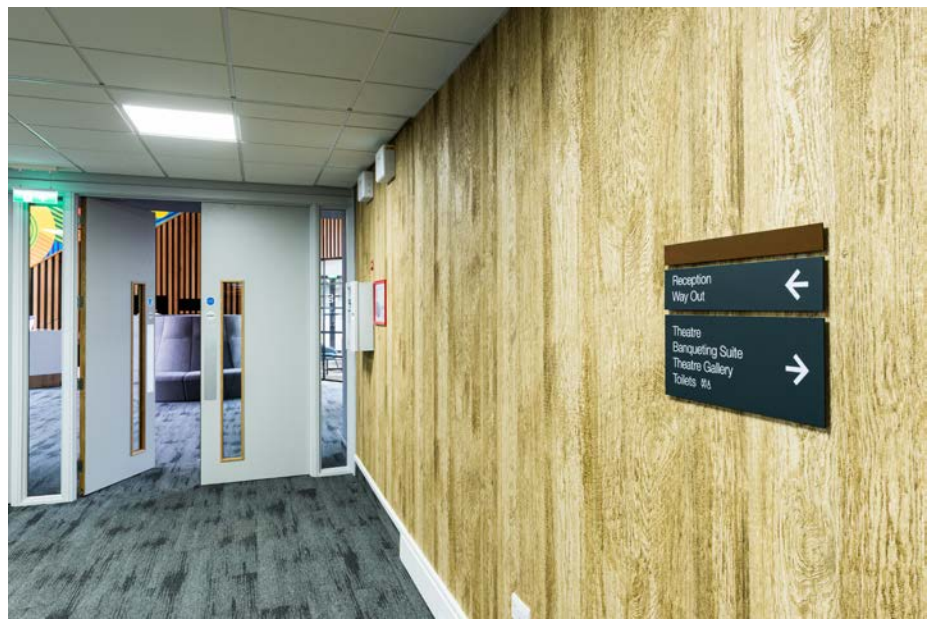

The quotation signage on the walls uses 3mm thick brushed stainless steel with glass bead blasted edging. We've mounted the signs with secure tape fixings.

The directory signage featured uses a Corten steel panel with an aged face finish and 4mm thick aluminium coated panels with a semi-gloss finish.

The atrium bar signage uses bespoke fabricated aluminium and Corten steel lettering with automotive grade paint finish. The letter faces and returns are dress welded and inlaid with LED module to provide illumination.
