

Deyes High School, Liverpool

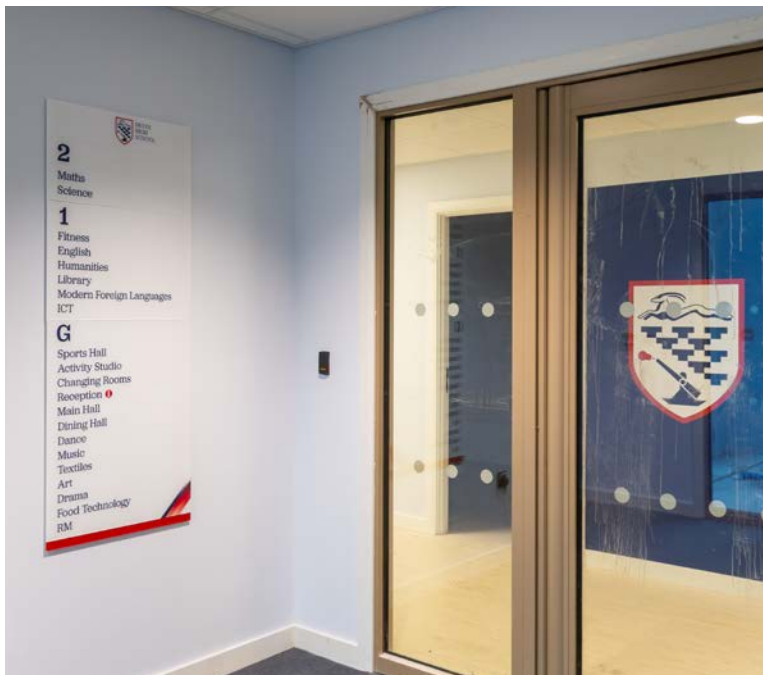

- Case Study

xsign provided the internal and external signage package at Deyes High School for architect, Pozzoni and main contractor, Kier.

Works to create a new school began in 2022. The school sought local funding to create a high-end interior finish and the school opened to students in 2024.

The external signage comprises built-up aluminium letters with 50mm returns, a built-up illuminated logo crest with 100mm returns, and 3mm thick aluminium letters.

Internally, we have provided our patented jigsaw and puzzle sign systems, digitally printed wall graphics and a range of cut lettering, pictograms and iconography.

On entrance to the building, we've supplied a 3 metre wide digitally printed high tack vinyl wall mural.

We've fixed a 100mm illuminated face logo crest sign to the external cladding, using ultra-efficient LED modules in cool white.

We've manufactured a range of 3mm frosted lucite signs to provide iconography for key facilities throughout the school.

We've provided 3mm thick frosted lucite cut letters with reverse polish edge detail in the reception area and the dining hall.

Throughout the school we have fitted out patented puzzle door sign that allows for the each changing of paper inserts.

Iconography provides wayfinding to key facilities. We've manufactured 3mm frosted lucite reverse coated toilet signs with a matt finish.
