

Solasta Riverside

- Case Study

xsign provided the internal and external signage package at Solasta Riverside, a high-end luxury residential building located at Buchanan Wharf in Glasgow.

The external lettering on entrance to the building is manufactured using aluminium. The letters have a 700mm cap height and 150mm returns, featuring prismatic faces with a Verometal brass effect finish. We also feature an illuminated totem sign with glass faces and stencil cut mask paint. We feature illuminated wall mounted tray signs and 3mm brass panels with etched text and black paint infill.

Internally, we have provided a broad range of 10mm angle brass frame directory signs with 3mm acrylic bonded panels. In the stairwells and corridors we have provided digitally printed Mactac Pro floor level indicators and apartment ID signs.

Floor level indicators are featured throughout the building. Gold leaf has been hand applied to mounted prismatic carved letters, spaced 10mm from the wall using brass tubes and spacers.

Throughout the building we have hand applied gold leaf letters to the face of glazing with a black underpaint from the other side of the glass.

The 3mm thick brass panel features etched text and black in-fill paint. The face panel is bonded to a 3mm thick black foamex spacer and bonded to the substrate.

We have manufactured a range of iconography and pictograms using 10mm angle brass frames with 3mm clear acylic panels bonded inside with direct white paint on the rear and a black overpaint.

Digitally printed vinyl Mactac Pro letters have been supplied throughout the building to help users navigate to apartments and key facilities.

We supplied overhead 2mm thick aluminium folded tray signs with vinyl graphics applied to the face. 50mm thick aluminium bang bars hang on heavy duty brass plated hanging chains.
