

Dock Offices, Canada Water

- Case Study

xsign provided the external signage at Dock Offices in Canada Water for creative agency f.r.a, who led on the design process. The scheme was developed for British Land as part of their placemaking strategy for this vibrant London district. Dock Offices is a Grade II listed former Dock Managers office.

The external signage package features a series of totem signs and wall-mounted signage, designed to be in-keeping with the space. We manufactured powder-coated aluminium wayfinding totems with tenant directory panels, mechanically fixed to custom fabricated frameworks and securely anchored to reinforced concrete foundations.

Additionally, we produced 10mm aluminium panels with white SAV graphics, resin-fixed aluminium panels with router-cut detailing, and wall-mounted signs incorporating concealed fixings and black PVC risers for depth and contrast.
